

FUSO BODY BUILDER NEWS 03/2025

Usage of FUSO Canter/eCanter

Published: 28.04.2025; FUSO Body Builder Mgmt.

Dear Body Builder Partner,

The following notice is directed to Body Builders that are using FUSO eCanter or Canter.

As the manufacturer of the base vehicle chassis we are required to monitor and to assess our products after market placement. This includes the combination of our base vehicle with third-party components which might compromise the safety of our vehicles, its passengers, or other traffic participants.

As one example for this, during our market monitoring there have been cases reported to us where equipment of the body (including side underrun protectors) have been installed in the radiation range of the Active Sideguard Assist radar sensors described in the body/equipment mounting directives (BMD). This may cause a false alarm or a malfunction.

The body manufacturer is bound to ensure that its bodies and equipment, fittings and modifications are themselves not defective, nor capable of causing defects or hazards to the overall vehicle. The BMD enable MITSUBISHI FUSO TRUCK & BUS CORPORATION to instruct the body manufacturer about important aspects that must be observed when mounting its bodies and equipment, fittings and modifications.

We would like to make clear that it is the bodybuilders sole responsibility to comply with the relevant regulatory and technical requirements.

We thank you for your continuous support and cooperation!
With kind regards,
